Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the phrase "such as a cellphone" is vague and indefinite. Also in claim 1, two separate references are made to "a modem". It is not clear whether these are the same modem, or two distinct modems.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Howard ('374).

Claim 1: Reference is made to FIG. 2 of Howard. Illustrated are an optical keyboard and keyboard processing unit (22). Since the optical keyboard can generate the letters on a standard keyboard (col. 3, line 56), it is apparent that the keyboard processing unit (22) can encode and decode ASC II data. The letters on a standard keyboard and their digital representations are both ASC II data. The optical keyboard is connected to input output terminals (30) and (35). An

analog to digital converter (29) reads as a first modem and converts the data from the optical keyboard to a wireless communication device (33, 34, 36, 37, 38). The wireless communication device then transmits signals to a remotely located computer (Host System) so as to control the remotely located computer. The remotely located computer (Host System) includes a modem (59) which can further transmit signals from the wireless keyboard into the Internet.

Claim 2: Howard illustrates an RF modulator (32,33) and transmitter (34) for transmitting data to a monitor (14 in FIG. 1).

Claim 3: FIG. 2 illustrates the host system as including a mouse.

Claim 4: The optical keyboard communicates with a remote computer which includes a modem (59) capable of external communication with the Internet.

Claim 5: Howard discloses a video monitor (14).
